Any additional details you would like us to know?

Could you kindly peruse the next page & give us your seal of acknowledgment? Send both pages. You may wish to print double sided. VERY important read before you send your project to us, including many definitions & facts.

- > **Satin Matte vs. Matte:** A Satin Matte is simply done with a finer finish. Looks identical to a military Parkerized finish.
- > **Standard Finish;** Takes the metal to a 320 grit.
- > **Original Finish:** How the gun came from the factory. It may be any of the other finishes.
- > **High Polish vs. Master Finish:** A High Polish is brought up to a 400 grit, while the Master Finish is anywhere from 600 grit to Jeweler's Rouge on a 3200 rpm buffing wheel, depending on the gun.
- > **2 Tone:** ie. Marlin 336, some Colts, etc. Two finishes on the same gun, ie a combination of Matte & High Polish
- > **Special Bath:** Anything with cast or color case hardened receivers or nickel steel.
- > **Blue Only:** Must be THOROUGHLY prepped, completely free of rust, especially in the basin of any pits, & oiled for shipping.
 - o If not properly prepped, it may be returned to you with active rust.
 - o If you choose to leave it here, it will be treated as a full bluing project & will be put in line.
 - o You may expedite for an additional charge.
 - o **YOUR PREP IS YOUR OUTCOME.** This cannot be stressed enough.
- > **Derust/Blue:** Bead blast to remove active rust, then reapply final finish & blue. Mostly used to prevent rust.
- > **Small Batch Run:** Up to 10 small parts that will fit in a 5" x 14" basket. Five screws equal one piece. No slides, receivers or handguns.
- > Wood spot touch-up & some stock repairs may be possible upon inspection or some fantastic photographs, but even then, we may need to see it in person. Cost & ability to perform service to be determined at that time.
- > If you want optional new parts installed, please source these & send them to us upon approval.
- > If your project comes in **assembled**, you will be charged a partial or full disassembly & reassembly fee.
 - o Includes bolts, ejectors, & extractors.
 - o If we disassemble, we will reassemble. If you disassemble, you will need to reassemble.
 - o We truly hope for all or nothing in this instance. It saves MIA parts on both parties.
 - o By fully disassembled we mean everything, & we mean everything comes apart - with the EXCEPTION of a barreled receiver. Too hard to reattach without marring your fresh bluing
 - o If you're disassembling, keep anything you do not want blued.
- > A barreled receiver is a complete gun, not a barrel, so send the bolt & small parts as well.
- > Post-1964 Winchester 94's can only be done in a matte finish in Special Bath due to the composition of the steel.
- > If you're active or retired Military, Law Enforcement, or a First Responder, please include documentation for 10% off your bluing cost. Does not include discounts on any other services.
- > Some guns may not have a serial #.

I acknowledge the above statements.
